Training Programme on

Research Methodology, Data Management and Biostatistics using Web-based Statistical Software

8th & 9th August, 2015

Time: 9.30 am - 5.30 pm

Venue:

Organized by

ChanRe Healthcare & Research Pvt. Ltd.
in association with
ChanRe Rheumatology &
Immunology Center & Research

The Immunology & Arthritis Research & Education Trust
Institutional Ethics Committee - CRICR
ChanRe Diagnostic Laboratory

Background

ChanRe Rheumatology & Immunology Center & Research, established in 2002, is a reputed institute for treatment of Rheumatological and Immunological diseases. It is involved in Biomedical Basic Research and Clinical Trials with an established research department. ChanRe Healthcare & Research Pvt. Ltd. is a sister concern, which has now ventured into knowledge-based services in bio-medical research. The company has moved into ventures like publications, research guiding and other innovative services.

Biostatistics as a discipline of research technology is useful in designing the study, collection and management of data, analysis and interpretation. In this information era, a large volume of data is generated through various research activities. Most of the researchers often face difficulty in handling data, in addition to the use of suitable statistical techniques to obtain the relevant information. Data management is the primary tool to be used before data is subjected to statistical analysis. ChanRe Rheumatology & Immunology Center & Research is organizing this two days training programme on Research Methodology, Data Management and Biostatistics for the benefit of research workers.

This training programme is designed to give the participants an overview of research methodology by expert lectures and discussions. In addition a major portion of the programme involves explanations and hands on exercises in biostatistics using web-based statistical tools. These will be done through the live internet connected projection and inducing the participants to use the software for calculations and analysis, etc.
