DIABETES SCREENING CAMP

Why is screening for diabetes important?

Every sixth diabetic in the world is an Indian, making the country the world's diabetes capital.

Diabetes is one of the major causes of heart disease, stroke, kidney failure, limb amputations, and blindness in adults.

Early screening and detection of diabetes can prevent or delay the disease progression.

Early diagnosis will save your health! It's never too late to make some small lifestyle modifications that could be a big step towards preventing diabetes. Get yourself screened
